

Artificial Tree Trunk Cover

If you have an artificial tree you may have the problem of a spindly stump at the bottom. Sometimes you try to cover it with greenery but what it really needs is an official trunk! This will only fit 9.5" wide x 7.5" tall or smaller so measure first. You will need to print two and glue them together to make it larger. Print on card stock if possible. You can cover it with clear contact paper if desired, for durability. Cut it to size and use tape or better yet Command Strips or Velcro to secure it around the base of your tree. Handled carefully it can be used for several years.

BEFORE AND AFTER
